

Tapcon Dome

For fast, neat, low profile installations

Tapcon cuts its own thread into a pilot hole drilled in concrete or masonry. Tapcon Dome massively reduces the installation time for service channel and bracketry, providing a secure anchorage that can easily be removed when necessary.

Product Advantages

Smaller drill hole than traditional anchors
(e.g. 6mm hole for 7.5mm anchor)

Anchor is set as it is inserted
Saves time and reduces risk of incorrect setting.

Range starts at 35mm long
To avoid hitting re-bar.

Neat low profile head
Provides an aesthetic finish and leaves more clearance inside the channel.

No expansion stress
Can be installed closer to edge or other anchors.

Installed with the Spit 328 24V SDS+ Hammer Drill with Condrive Sleeve or Spit IW1280 18V Cordless Impact Wrench.

T30 Drive Recess

For fast installation and easy access in tight spaces.

16mm Diameter Head

No need for separate washer.

Anti-rotation

Serrations located under head - to provide grip.
